Quizzary

Are promises new to JavaScript as of ES6?

What are the three promise states?

What does settled mean?

Do you have to rewrite existing promise based code to work in ES6?

How do you register an error reaction?

Why is `resolve()` used instead of `fulfill()`?

Quizzary

What does locked-in mean?

What does resolved mean?

What purpose does executor serve?

Explain the separation between deferred and thenable interfaces?

Why are 3rd party promise libraries still useful?

What is an unhandled rejection? rejection handled?

How can you catch unhandled rejections when testing?
